
EcoRafiky
RESTORE / GROW / PROSPER
Restoring Kenya's Drylands.
Financed by market demand.
ECORAFIKY COLLECTIVE FOR CLIMATE ADAPTATION (ECCA)

THE CRISIS

Kenya's drylands are collapsing.

80% of Kenya is classified as **Arid or Semi-Arid Land** (ASAL)

The collapse cascade: The remaining 20% is slowly…

Drought → Bare soil → Flash floods → Topsoil loss → Desertification

95% crop failure in Kitui (2025)

800,000 people now rely on food aid

THE INSIGHT

Two worlds. One crop. Sorghum.

Kenya's beer industry is already paying for what the drylands are dying to grow.

THE DEMAND

17.7M kg

of sorghum imported by Kenya in 2024

KSh 128B EABL revenue (2024)

THE LAND

40% of ASAL

can support drought-resistant sorghum farming

Deep roots regenerate vegetation cover & soil

We turn beer demand into a land-regeneration engine.

THE SOLUTION

A 4-step land restoration system.

Sorghum is not the goal. Restored, productive drylands are.

1. **Identify degraded land**
   Cracked, bare, post-flood soils.
   DIAGNOSTIC

2. **Install Rippers/ Zai pits + biochar**
   Break crust. Trap water. Restore soil carbon.
   WATER + SOIL

3. **Plant drought-resistant sorghum**
   Deep roots break compaction; vegetation cover returns.
   VEGETATION

4. **Restored productive land**
   Carbon sequestered, income earned, food produced.
   REGENERATION

Laikipia pilot: bare land restored to 30% vegetation cover.

BUSINESS MODEL

How market demand pays for restoration.

SUPPLIERS

Women farmers

Grow drought-resistant sorghum on restored land.

Earn income + restored land

→

AGGREGATOR

Eco Rafiki

Buys harvest, processes, sells.

70% | **30%**

→

BUYER 1 · bulk purchase

Breweries (EABL et al.)

Pay: **KES 40 → 45 / kg**

BUYER 2 · small batch processed

Schools & NGOs (Nutri-Pop)

Pay: **KES 7 → 13 / 30g sachet**

Restored land + women's livelihoods are the byproducts of a profitable supply chain.

IMPACT & KPI

Four metrics. Measured. Verifiable.

By Dec 2026 - our climate dividend, audited in hectares and tonnes.

40

HECTARES

of degraded drylands restored

50%

VEGETATION COVER

regained on restored plots

100 MT

CO_2 PER YEAR

sequestered in soil & biomass

100

WOMEN

earning €880/year on regenerated land

Where ecology pays for itself.

TRACTION

We've already proven it works.

Laikipia pilot, 2025 - measured outcomes, signed partners.

4
hectares regenerated

+30%
vegetation cover gain

4,200 kg
sorghum harvested

119
Nutri-Pop sachets distributed

30
women onboarded

Commercial Validation

- EABL supplier compliance pathway underway
- 3 school procurement
- Post-harvest storage partnership secured
- Seed/training partnerships established

Seeds Distribution in Rumuruti Laikipia

ROADMAP

From 4 to 200 hectares.

Vegetation cover compounds each year. So does revenue.

PILOT — 2025

- Laikipia field
- **4** hectares regenerated
- **30** women onboarded
- **30%** vegetation cover
- NutriPop tested in schools
- Initial market validation from local buyers

SCALE — 2026

- Launch in Kitui
- **40** hectares regenerated
- **100** women onboarded
- **40%** vegetation cover
- Nutripop rollout to first schools
- Begin industrial supply partnerships

EXPAND — 2027

- County-wide rollout
- **80** hectares regenerated
- **200** women onboarded
- **50%** vegetation cover
- Full NutriPop distribution
- Stronger recurring revenue cycle

OUR PRODUCT: NUTRIPOP

A nutritious porridge blend made from dry land harvests for ECD children in the same farming communities.

VALUE ADDITION

We add value to dry land harvests by processing them into Nutripop, a nutritious porridge blend for ECD schools within the farming communities.

AFFORDABLE MEALS

By partnering with school feeding NGOs, we supply Nutripop to ECD schools at affordable prices, helping parents support regular school feeding and enabling schools to sustain their programmes.

CHILDREN'S NUTRITION

Nutripop is designed as a nourishing meal to support children's nutrition and help reduce hunger related absence and school dropout.

EcoRafiky

RESTORE / GROW / PROSPER

Our Work on the ground In Kitui and Laikipia

THE TEAM

Built by people who live near the problem.

Maureen Meso

Founder & Resource Mobilizer

UNDP – Youth for Climate Fellow. Bevisioneers Fellow. FAO-ALEP Fellow.

Serah Mwangi

Restoration Geospatial Analyst

5 yrs at ICIPE on dryland ecology.

Kelvin Kariuki

Heads of Partnerships

Holds a Masters in Project Management

Joshwa Tambo

Head of Product (Partner)

Founder, Afri-Fortified.

Together: 25+ years across restoration ecology, M&E, food systems, and rural finance.

THE ASK

We use market demand to finance land restoration.

Help us scale from 40 hectares in just 1 year and turn climate collapse into a regeneration economy.

40 ha
restored drylands

100 women
earning yearly income

100 MT
CO_2 captured / year
